

CEO VERDICT: VETOED — WEAKEST FILE OF THE FOUR

Price (17 Jul 2026)	Fall from high	Firm's fair value	Price vs fair value
\$214.96	−38%	\$35-59	+412% over

WHAT THE 12 AI DEPARTMENTS CONCLUDED, IN ONE SENTENCE
A real bottleneck, a real order book — wrapped around a company that has never earned its cost of capital in 25 years, with half its revenue flowing through a vehicle it co-

DEPARTMENT SCORECARD

Each AI department scored the idea out of 100. Lower = worse for buying at today's price.

THE PRICE GAP

Blue band = what the firm thinks it is worth. Red dot = what it costs today.

HOW FAR IT HAS FALLEN

BE highlighted in blue; the other three names shown for context.

THE CASE FOR — what the agents found genuinely good

- The bottleneck is real and datable: grid connection queues now exceed 8 years, and Bloom can deploy on-site power in ~90 days.
- Explosive growth: Q1-2026 revenue \$751.1M, up 130% year-on-year; full-year guidance \$3.4–3.8B.
- Brookfield expanded its financing framework FIVE-FOLD to \$25B (30 June 2026).
- Genuinely excellent balance sheet: no net debt, a 0% coupon, and nothing due until November 2030.
- Policy is a real tailwind — the 30% fuel-cell investment tax credit was restored in law, and federal emissions risk to a gas-fired fleet was cut.
- First-ever GAAP-profitable quarter arrived in Q1 2026.

THE CASE AGAINST — why the firm is not buying

- Has NEVER earned its cost of capital in 25 years. ~\$4.8B of lifetime capital raised; FY2025 was a NET LOSS of \$87.1M.
- About 43% of FY2025 revenue ran through joint ventures Bloom CO-OWNS — the moat analyst calls it 'a financing structure being reported as demand'.
- Shareholders diluted ~85% in five years, and \$2.2B of convertible notes are now in the money — more dilution is live.
- Economics are inferior: fuel cells cost \$3,000–6,000/kW versus \$400–800/kW for gas turbines. The advantage is availability, not cost.
- The window closes: GE Vernova's turbine capacity scales through 2029–31, and Bloom is 'the world's best bridge generator — bridges get demolished when the road opens'.
- Fair value \$35–59 vs a \$214.96 price. Even a fully steel-manned bull case is worth \$58.61 — 73% below the price.
- A short-seller report (8 July) alleges undisclosed China dependence for a key material; two law firms opened investigations. Bloom denies it.

WHAT WOULD CHANGE THE ANSWER — the tripwires to watch

- Whether related-party revenue FALLS as a share of total in the FY2026 annual report — the single highest-information line in the file.
- The 28 July earnings, with a ~32% implied move — four times KLA's.
- Any filed class-action complaint, auditor change, or equity raise above \$194.97.
- Price near \$35–45 would be a starting point for a conversation, not a buy.

RISK OFFICER'S RULING (John, CRO — holds veto power)

VETOED — fails on price, on measurement, AND on process

QUALITY CONTROL — what the AI Auditor caught (AI 管理層)

The audit FAILED the financials: FY2025 was reported to the CEO as a \$6.0M PROFIT when the filed figure is an \$87.1M LOSS — and the correct number was sitting in another report in the same package. It also found the four reports were substantially ONE analyst's opinion wearing four signatures, and that the bull case was never independently tested.

Research and decision support only — NOT financial advice. Markets cannot be reliably predicted.

No agent may place a trade. Nothing happens unless the Owner places it personally.
